- **Backend Development & APIs -** Node.js, Express.js RESTful API Development and Integration Authentication Systems (NextAuth v5, JWT)
- **Database & Data Management -**MongoDB, Mongoose ODM, Prisma ORM, Firebase Firestore, Database Design Real-time Data Synchronization

Projects

Drofy | A Drop-Shipping Ecommerce Platform

Live | Github

- It's a clean, user-friendly online shop where anyone can sell products without keeping them in stock, and you earn money when people you invite make sales, even through their friends, up to four levels deep.
- A dropshipping platform with role-based dashboards for users and admins, multi-level referral commissions, integrated payments and couriers, and inventory tracking with size-based stock control. Advanced product category management, Customer support via ticketing, balance history tracking, image to product, and more.
- Developed both the frontend and backend using Next.js, with MongoDB as the primary database, Prisma ORM for data querying, and Firebase Firestore for file storage. NextAuth v5 for authentication with a custom data layer for enhanced security and scalability.

Becha Kena | A Subscription-Based Multivendor Ecommerce Platform

Live | Github

- Becha Kena is a subscription-based multivendor eCommerce platform where users and merchants must subscribe to buy or sell products. Merchants can sell in wholesale or single units and boost products to gain more visibility through banner, category, and search placement.
- Includes role-based dashboards, product boosting (standard/premium), stock & order management, subscription control, user follow system, and advanced authentication with full eCommerce functionality.
- Built with Next.js, React, Tailwind, MongoDB, Prisma ORM, and NextAuth v5. Integrated ShurjoPay & SSLCommerz. Code is modular, responsive, and well-commented for maintainability.

Certifications

1. **Complete Web Development, Programming Hero** **2023**
2. **Next Level Web Development** **2024**
